

Ship Fenders

Summary

Dominion Diving has a collection of Yokohama Ship Fenders available for rent. They are ideal for harbour, offshore, and ship-to-ship applications. Dominion Diving's ship fenders ensure high energy absorption and low reaction force, providing the utmost protection for your vessel while berthing in rough weather conditions.

Quantity	Length	Width	Additional
3	11ft	6.5ft	Complete with Chain and Tire Net

Exterior

Encapsulated in a thick and heavy-duty nylon reinforced Polyurethane skin.

Interior

A heat laminated 100% closed cell foam core that is high-energy absorbing, with a low reaction force and cannot be ruptured.

Performance

The performance of a foam fender is comparable to that of a pneumatic fender, with the key advantage of having the ability to maintain function in the case of a skin puncture, unlike a pneumatic fender, which may deflate.

Applications

Cruise ships, container vessels, bulk cargo, Ro-Ro and ferries, oil and gas tankers, general cargo, navy berths, and ship-to-ship transfers.

Additional Various Sized Ship Fenders are Available for Rent
